ABOUT **US**

EEN Consulting is a young and vibrant energy consulting and implementation company whose partners have vast experience in the built environment, supply chain, project management and medical fields.

We are passionate about driving sustainability in the Nigerian built environment and we believe that for the future to thrive living life needs to be sustainable, and sustainably should start in our homes, our offices, our schools and our hospitals.

If we build sustainably then we begin to live sustainably, and we give the future a chance.

OUR **MISSION**

To provide world class consulting and implementation of energy efficiency interventions for the Nigerian Market.

OUR **VISION**

To ensure that energy is efficiently implemented and used in the Nigerian market while boosting economic growth.

EEN CONSULTING NIGERIA

OUR **SERVICES**

AT EEN Consulting, we provide a wide range of structural & advisory green energy engineering services.

FLOW REGULATORS & AERATORS

In collaboration with Neoperl® are able to provide you with extremely modern and easy to retrofit flow regulators & aerators to meet and sustain your water sustainability goals.

SOLAR INVERTERS

We offer basic and hybrid inverters powered with either tubular, gel or Lithium batteries and supported with up to 5 year warranty

SMART METERS

In collaboration with Solid Green South Africa, we are able to provide you with extremely modern and easy to use smart meters that you can use to monitor and drive down your energy consumption in order to meet and sustain your green energy goals.

IFC EDGE CERTIFICATION CONSULTING

Our team of EDGE experts are able to guide your team through the EDGE Certification process in an efficient a timely manner.

We are also able to consult and advise on energy management.

FLOW REGULATORS & AERATORS

As the exclusive distributor of authentic Neoperl® products in West Africa, EEN is able to provide you with extremely modern and easy to retrofit flow regulators & aerators to meet and sustain your water sustainability goals.

Neoperl® is a leading technology company that offers innovative solutions for drinking water.

Neoperl products shape the water stream, regulate the flow rate, and protect the water from contamination.

Their slogan sums it up: **FLOW, STOP AND GO.**

As a family-owned and -driven, German-Swiss company, Neoperl® combines the best of both cultures: precision, the ability to innovate, and open-mindedness.

Their proud distinctive engineering heritage enables them to guarantee high quality, safety and robustness, to make our customers' products better.

NEOPERL®

flow, stop and go®

SOLAR **INVERTERS**

EEN is a leading provider of solar installations, offering customized solutions for various energy needs. With a strong focus on renewable energy, EEN specializes in delivering high-quality solar products and systems.

For residential installations, EEN offers a comprehensive package that includes solar panels, inverters, and lithium ion batteries. This configuration empowers homeowners to harness the sun's energy, reducing reliance on traditional power sources and contributing to a greener future.

In the commercial sector, EEN provides tailored solutions for specific requirements. Our expertise lies in deploying reliable power systems for server rooms, communication rooms, and security rooms. We also provide wholistic setups for offices, hospitals, hotels, banks etc.

With a commitment to sustainability and cutting-edge technology, EEN is dedicated to meeting the energy needs of our clients while reducing their carbon footprint. Our comprehensive range of solar installations, combined with expertise in renewable energy solutions, positions EEN as a trusted partner for residential and commercial customers alike.

IFC | International Finance Corporation
WORLD BANK GROUP

Creating Markets, Creating Opportunities

WHAT IS **EDGE?**

EDGE is a green building certification system created by IFC, a member of the World Bank Group, for use in more than 140 countries.

EDGE is a measurable way for builders to optimize their designs, leading to a more investment-worthy and marketable product.

By keeping certification fast and inexpensive, EDGE keeps pace with the momentum that developers need to stay at the forefront of the green building trend.

The EDGE Certification may be used for a wide range of building types including:

1. Homes
2. Hotels
3. Resorts
4. Retail Outlets
5. Industrial buildings
6. Office buildings
7. Healthcare buildings
8. Education buildings
9. Mixed Use buildings (any combination of building listed above)

And the list continues to grow everyday.

As the rest of the world works towards going green, it is important that Africa is not left behind; and EDGE provides an affordable & easily attainable way to do so.

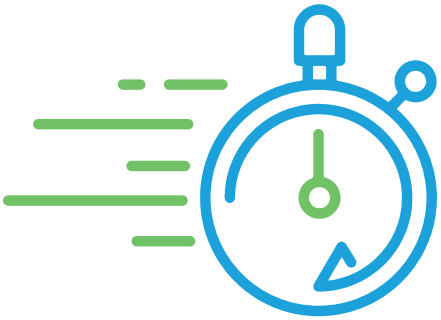

Excellence In Design
For Greater Efficiencies
Edge

Never before have building design teams been able to quickly and easily choose systems and solutions while immediately viewing the financial and environmental impacts. The EDGE complimentary software is available at edgebuildings.com.

SMART

Beneath an intuitive interface is a powerful engine that understands local climatic conditions and how the building will be used by occupants.

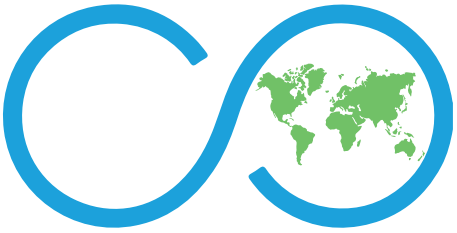

FAST

Discover the ideal bundle of measures for the best investment return within minutes.

AFFORDABLE

The EDGE software is free to everyone with certification available at a modest cost.

INCLUSIVE

With EDGE, green buildings are suddenly available to all.

WHY EDGE?

1. **EDGE has been specifically designed for emerging markets.** The EDGE certification takes into account the challenges of the emerging markets, rather than providing a one size fits all; the EDGE certitication is acheived by improving your buildings water, energy & material efficiency by over 20% of your national average.
2. **It allows fast and effective appraisal of green building metrics for any building type.** EDGE provides 2 main tools to make the sertification process easy and straight forward; the EDGE App & trained certified EDGE experts to guide you through the process available locally. ***At EEN all our engineers are also EDGE Experts***
3. **The EDGE App.** This app can be used by developers and engineers to determine the most cost-effective green strategies to include in their projects.
4. **Financial Benefits.** Getting EDGE Certified presents a number of financial benefits to developers, building owners & building operators. these benefits include but are not limited to:
    - Increaded property values/ higher sale price
    - Significantly lower utility bills
    - Higher Resale Value
5. **ESG complaiance.** With the countless benefits of being ESG compliant in today's world, EDGE certification provides a straight forward and sustainable way to start or continue your company's sustainability journey.

HOW DOES EDGE WORK?

There are 4 main uses of the EDGE app:

1. Green Building Certification
2. Financial Analysis
3. Building energy modelling and analysis
4. Building Energy Efficiency Code compliance

1 Green Building Certification

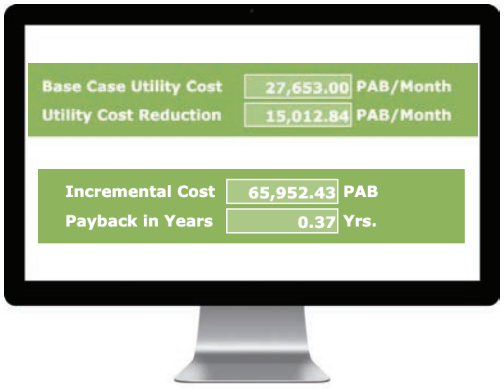

The EDGE certification is a green building certification system that measures the performace of an improved building against a conventional building in the same city. It measures it against 3 main parameters:

1. Water usage
2. Energy consumption
3. Building material sustainability

It has been optimised to cater to the local environment and it is easily attainable.

2 Financial Analysis

EDGE is the only green building software in the world with a free, built-in financial analysis calculator.
The capital cost and running cost implications of going green are determined in the design phase of your project.

The EDGE software measures the percentage savings of a building with an improved design compared to a baseline building with standard construction .
Incremental costs are provided based on the selected interventions for the project using a built-in database. Results display automatically and do not require additional user input.

3 Building energy modelling & analysis

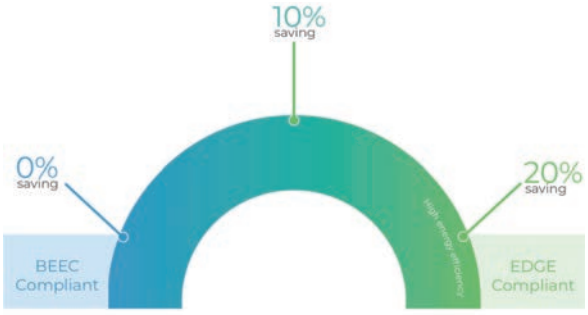

Energy modelling must be an integral part of any energy efficiency project, but it is often not accomplished.

The EDGE energy modelling software is:

1. Web based and easy to use
2. Virtually user error free
3. Tailor fit for most major cities in Nigeria to ensure the most accurate predictions

4 Building Energy EffiEiency Code compliance

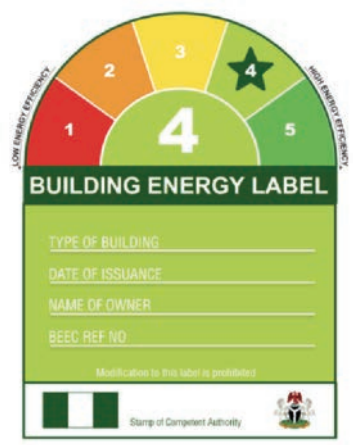

Nigeria's Building Energy Efficiency Code is a set of guidelines that outline the minimum level of energy efficiency that must be achieved.

The guidelines were developed in The Federal Capital Territory of Nigeria by the Ministry of Works Power and Housing with assistance from GIZ.

In order to be BEEC compliant, either the prescriptive or the performance path must be followed.

The EDGE App can be used to acheive the Nigerian BEEC standards and makes it easy to follow the performance path.

Why EDGE for BEEC?

	Edge (Excellence In Design For Greater Efficiencies)	Standard energy modelling software
No past experience needed	✓	✗
Free	✓	✗
Quick & real time simulations	✓	✗
User error eliminated	✓	✗

THE EDGE PROCESS

Certification is initiated at the early design stage, when details of the project are entered into the EDGE software and green options are selected. The project must reach the EDGE standard of a 20% improvement in energy, water, and materials as measured against local construction practice. When achieved, the project is registered for certification.

During the certification process, documentation is submitted by the client and reviewed by EDGE-trained auditors at the design and construction stages, with a site audit performed.

Projects that meet the EDGE standard receive a certificate confirming predicted performance.

IN **SUMMARY**

Sustainable buildings have both economic and environmental advantages. The means of appraisal of these advantages is often more complex than the skills available.

Nigeria has also developed a BEEC in which one of the compliance paths available requires energy modelling to determine compliance. There is, however, a lack of skilled practitioners to render the required service in Nigeria.

Using the EDGE software will ensure developers and engineers have all the correct data to base their decisions. This will ultimately lead to more green buildings.

OUR **TEAM**

OBINNA **UKWA**

Co-Founder/ Managing Director

Obinna is a Certified Edge Expert with a background in Mechanical & Civil Engineering

UNOMA **GRANT**

Co-Founder/ Chief Executive officer

Unoma is a Certified Edge Expert with a background in Mechanical Engineering & Business Management

FRANCIS **WOODS**

Studnet Intern

Francis is a Civil engineering student at the University of Ibadan. He managed our social media accounts.

OUR **CUSTOMERS**

ACCESS BANK NIGERIA

THE MILLARD FULLER FOUNDATION

PAELON MEMORIAL HOSPITAL

STERLING BANK PLC.

OUR **PARTNERS**

In partnership with **SOLID GREEN CONSULTING** in South Africa, we can offer building & property developers a modern range of consulting services to help them achieve and sustain their green energy goals.
Solid Green has received numerous awards for their Green Star certification work.

NEOPERL® is a leading technology company that offers innovative solutions for drinking water. Neoperl products shape the water stream, regulate the flow rate, and protect the water from contamination.
